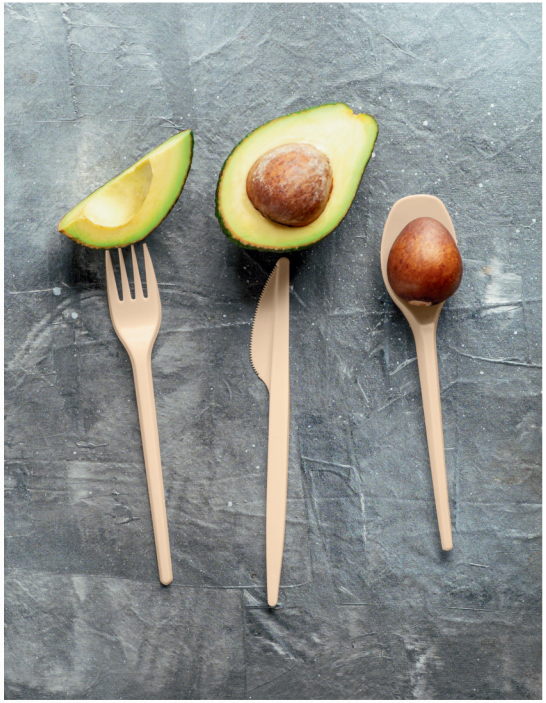
COSMOS ECO FRIENDS®

Biodegradable, Compostable, Eco-Friendly Products

Eliminating single-use plastic since 2011.

About us



Back in 2011 we started out with a manufacturing facility in Gurgaon, India specializing in the manufacturing and sale of biodegradable single use disposable tableware. Today we're one of the leaders in our industry, with a diverse client base. Our journey has been enlightening, and we attribute our success to honoring our original ideals. ***Cosmos Eco Friends*** *comprises a team of motivated, dynamic, and passionate individuals committed to our goal of providing high-quality, economically priced biodegradable products that reduce environmental degradation. By merging bioscience and nature, we offer sustainable, clean solutions to the world. We manufacture and supply 100% biodegradable and compostable disposable food service products such as cutlery, plates, bowls, containers, clamshells, meal trays, and cups. These are made from biodegradable materials such as cornstarch, bamboo fiber, bagasse, and other compostable materials.*

Our Mission

Being Eco Friendly

Our products are eco-friendly, crafted from plant-based materials, ensuring both premium quality and affordability.

Aim to create a lasting impact.

We aim to create and sell products that have a positive impact on the environment, society, and governance.

Be a positive role model for others.

We adhere to rigorous quality and testing processes to meet global standards.

Vision

The Earth is heavily polluted by non-degradable plastic products, and many are making efforts to correct this situation for cleaner and better living for current and future generations. Biodegradable and eco-friendly products are part of the solution. ***Cosmos Eco Friends*** *continuously develops new forms of biodegradable products, evaluates new materials, and adopts new manufacturing processes to and environmentally friendly solutions with low carbon footprints.*

Cosmos Eco friends *is continuously working in the development of new forms of biodegradable products and is actively involved in evaluating new materials, and new manufacturing processing.*

The objective is to and and develop new biodegradable opportunities that perform well and are environmentally friendly.

We are hoping to increase the numbers of biodegradable products we can offer as they become available to us.

So Why Go Green?

Reports indicate that the planet's bio-capacity has exceeded by 25%, and our way of living is having disastrous effects. Biodegradable products directly sustain dwindling resources, reduce pollution and waste, require less energy and water to produce, come from renewable resources, are created from waste byproducts, and contribute to saving biodiversity and habitats.

- *Biodegradable products directly help and sustain our dwindling resources.*
- *Eco-friendly products reduce pollution and waste*
- *Require less energy and water to produce*
- *Come from renewable resources*
